

Management Services – ACI Secure

ACI Solutions Security solutions are modularized to maximize the benefit and flexibility realized by ACI customers. ACI’s modular Managed product paradigm results in managed firewall service offerings that can be deployed on a variety of hardware platforms.

ACI managed firewall provides the highest levels of protection for applications, data and systems, without compromising performance, availability or scalability.

Key Benefits

ACI combines a world-class team of experts and a comprehensive set of products and services to provide a customer’s business with the tools, techniques, and knowledge necessary to secure its infrastructure.

- Increases the security of your Internet, intranet and extranet environments
- Offers you a fully managed end to end solution
- Reduces your capital investments, staffing and maintenance expenses
- Reduces the complexity associated with managing your IP network firewall security solution
- Allows you to customize your security policies and define different levels of security for various users and applications
- Utilizes industry-leading hardware and software with proven and reliable technology
- Integrates easily with your current infrastructure

Related Services:

ACI Solutions understands the critical importance of data and equipment security. The customer can purchase complementary security services:

- **Endpoint Security**

ACI Solutions Endpoint Security assists you with two critical Internet security challenges: deploying effective firewall policies and enforcing compliance of company security procedures related to antivirus and application use.

- **Encryption Services**

Data breaches and risks associated with unauthorized access to corporate information or intellectual property are at the forefront of IT organizations around the world. ACI Solutions carrier agnostic Encryption Services helps protect privacy of email messages and data file content.

- **Network-Based Firewall**

ACI Solutions Network-Based Firewall Service provides a fully-managed, secure, cost-effective solution that allows you to manage and control employee access to the Internet and prevent unauthorized access into your corporate network, without the expense of premises-based equipment.
